

***You committed your  
practice to the health  
of your patients...***

***Your Patients Deserve Waterclave.***

"Biofilm" is no longer an industry buzzword. In fact, the American Dental Association has established a standard of less than 200 colony-forming units of bacteria per milliliter of water (CFU/ml). Until recently, products designed to process water to meet the ADA's minimum standard were unreliable and maintenance intensive.

Waterclave is simply the first water purifying system that exceeds the ADA standard (Zero CFU/ml for 3 to 6 months maintenance free) while operating as a virtually maintenance free system.

Waterclave achieves these results by purifying water at its source, under intense heat and pressure, not unlike a standard autoclave. Better yet, Waterclave accomplishes Zero CFU/ml without chemical additives or filter replacement. Simply turn the Waterclave on and rest assured that you are treating your patients with healthy, uncontaminated water.

A standard Waterclave unit is capable of serving up to 40 dental stations and is guaranteed to exceed ADA and FDA standards for bacterial content in water distribution systems.

Call Waterclave today for a free brochure or to speak with a sales representative.
